

PLASMA BIONICS

V10 AIR PLASMA STERILIZER
REDEFINING VETERINARY INSTRUMENT STERILIZATION

REDUCE OPERATING COSTS
STERILIZE CRITICAL INSTRUMENTS
SAFE AND ENVIRONMENTALLY FRIENDLY

plasmabionics.com

Reduce Operating Costs

Low cost per cycle • Low maintenance • No installation cost

The V10 Air Plasma Sterilizer uses just air and electricity to sterilize critical veterinary instruments. The proprietary air plasma generation method produces multiple reactive oxygen and nitrogen species from air that rapidly destroy microorganisms on instrument surfaces. The sterilant gases are converted back into harmless air once sterilization is complete.

Sterilize Critical Instruments

**Sterilize lumen faster • Sterilize electronics and optics
Extend sensitive instrument life**

Safely sterilize critical instruments with the V10 Air Plasma Sterilizer, especially those that may be heat and chemical sensitive. The Air Plasma Sterilization™ process is compatible with electronics and optics and may extend the usable life of sensitive veterinary instruments.

Safe and Environmentally Friendly

**Low heat and pressure • No chemical consumables
No harmful byproducts**

By eliminating the need for high temperature, high pressure, and harmful chemicals, the V10 Air Plasma Sterilizer provides a safe, intuitive, and environmentally friendly solution for veterinary instrument sterilization.
